

# CITY OF BOULDER WATERSHED MAP

*City of Boulder, Colorado*

The City of Boulder needed an eye-catching map that would educate people on the source of Boulder's tap water. The graphic needed to be both easy to understand, geographically accurate and interesting to look at. CTM worked with the City to produce a 3D watershed map that identified their hydroelectric plants, treatment plants, water pipelines and reservoirs, along with the drainage basins that are the source of their drinking water.

The resulting map has been reprinted in the local phone book, included in numerous mailings and is on display in many public buildings. It has been used as an educational tool by City officials, scientists and in local schools. In fact, this map has become one of the City's most highly requested documents.
